

Adriana Guigova

Adriana graduated Magna Cum Laude from Fordham University Lincoln Center with a BA in natural sciences.

She has not yet decided which field of medicine she would like to pursue. Adriana says, “I decided to become an anatomy fellow because I enjoyed spending time in the anatomy lab- dissecting and learning all of the different structures. The fellowship gives me the opportunity to better my knowledge of human anatomy and also gain the skills to conduct a research project.”

Adriana started dancing when she was very young in Bulgaria and continued to dance in a NYC ballet company until her first year of medical school.

Adriana has helped to author one publication:

Morris, JZ, Bergman L, Kruyer A, Gertsberg M, **Guigova A**, Arias R, and Pogorzelska M. 2008. Mutations in the Drosophila Mitochondrial tRNA Amidotransferase, *bene/gatA*, Cause Growth Defects in Mitotic and Endoreplicating Tissues. *Genetics* 2008 178: 979–987.
