NYCOMEC Office: 516-686-3730

Registration and Breakfast: 8:30 Am - 9:00 AM

Buffet Lunch at Noon

PRACTICE MANAGEMENT SESSION

9:00 AM

Planning Your Entry into Medical Practice

Patrick Molloy

Molloy & Co.

The light at the end of the residency training tunnel is becoming visible and you have acquired the medical knowledge to treat patients. It is now important to learn about the important issues pertaining to entering medical practice and become a more savvy and educated physician prior to entering the "real world of medicine." Solo versus Group Practice, Tail versus Occurrence malpractice insurance, contract pitfalls to beware of and other issues will be discussed.

10:30 AM

Professional Misconduct—"Me? No Way!"...(or so you think)

Michael Schoppmann, Esq.

Kern, Augustine, Conroy and Schoppmann, P.C.

Medical misconduct is a serious issue with possible devastating consequences. Many physicians are not aware of what constitutes misconduct. Some obvious cases of medical misconduct include practicing with gross incompetence, abandoning a patient in need of immediate care and being convicted of a crime. However, there are other situations that may not be so obvious, but still carry the same consequences. Are you safe? Do you really know that constitutes medical misconduct? Various scenarios will be discussed.

GRAND ROUNDS – 1:25 PM - Welcome

1:30 PM

Surgery in the Second Millennium—From Open Procedures to NOTES, LESS and Beyond...

Richard Lazzaro, M.D., Director, General Thoracic Surgery

Maimonides Medical Center

Surgery has progressed as has other specialties. It is now possible for surgeons and patients to not only be in different rooms, but even different countries! There was a major paradigm shift from open procedures to laparoscopic surgery. What else is in the pipeline for the next shift besides NOTES (Natural Orifice Transluminal Endoscopic surgery) and LESS (Laparo-Endoscopic Single-Site Surgery)? Will the risks outweigh the benefits?

2:30 PM

"So You Want to Buy a Kidney?" Physicians, Ethics & Organ Transplantation

Norman Gevitz, Ph.D., Professor of the History & Sociology of Medicine

Department of Family Medicine, NYIT/NYCOM

There has been widespread attention to efforts by some desperate, well-off patients to bypass long established organ transplant registries to purchase kidneys through brokers from desperate, poor living donors. Is this sale of kidneys ethical or good public policy? This interactive session is based upon a problem-set. After reviewing standard ethical concepts and using the principles of moral reasoning, you will be able, in an informed way, to address these issues with laymen as well as other professionals.

3:30 PM

Exercise as Medicine

Stephen Daquino, D.O., Sports Medicine Program Director

Plainview Hospital

Diabetes, Obesity and Hypertension—what prescription could be given for both the prevention and control of these chronic diseases? Exercise. There has been a movement to encourage physicians to not only tell patients to exercise, but to actually counsel them and prescribe a regimen. Exercise is not only for the young and healthy. Are you prepared to write the prescription?

4:30 PM

Practical Applications of Osteopathic Medicine into Clinical Practice: Direct and Simple Methods to Incorporate Osteopathic Philosophy and OMT into Everyday Clinical Practice for Basic Pain Management

Rebecca Fishman, D.O., Physical Medicine & Rehabilitation Program Director

Long Beach Medical Center

How do physicians identify the barriers that prevent patients from reaching their maximal healing potential? What strategies using osteopathic principles can be used to promote compliance? This presentation will involve both discussion and demonstration regarding simple but effective OMT techniques and clinical pearls that will enhance patient care that could easily and quickly be incorporated into every day practice.
