Avoiding Plagiarism

“Plagiarism means using another’s work without giving credit. You must put others’ words in quotation marks and cite your source(s), and must give citations when using others’ ideas, even if those ideas are paraphrased in your own words.

Using words, ideas, information from the Internet, computer code, or any work by someone else without giving proper credit is plagiarism. Any time you use information from a source, you must cite it.”

-Avoiding PLAGIARISM Mastering the Art of Scholarship

Citing your Sources

Cite your sources using the style format preferred by your instructor. Common formats include MLA and APA. While there are differences in style, each format requires that you create a listing of bibliographic citations for each source used in your assignment. Each bibliographic citation must contain all of the information needed to identify and locate the cited book, article, web page, report, or other research.

Bibliographic information includes: author, title of article, title of publication, date of publication, publisher name, and location of publication. Different types of resources may need additional information.

Citation Generators

If you have all the citation information but need help with the formatting, citation generators can help. Try one of the below sites to plug-in citation information and output a correctly formatted citation.

Knite Cite
